Limnology is the study of inland waters - lakes, reservoirs, rivers, streams, wetlands and groundwater. Limnological studies have great significance today. These studies provide us a path to explore freshwater bodies in various aspects. It is the study of the structural and functional interrelationships of organisms of inland waters as their dynamic physical, chemical, and biotic environments affect them. Until and unless we have a proper understanding of a water body, it is impossible to exploit it in an appropriate way. A limnological study of Tighra Reservoir, Gwalior, Madhya Pradesh was carried out. The study included both physico-chemical analysis as well as biological studies of the reservoir. Such studies not only enable us to understand a water body but also help in better utilization of it. This book is an outcome of such a study. The whole study has been presented in the form of seven chapters along with references. The book will be very useful for academicians, researchers and students, working in the fields of limnology and environmental sciences. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.
