This report provides an overview of the current state of knowledge about why some people hear voices, experience paranoia or have other experiences seen as 'psychosis'. It also describes what can help. In clinical language, the report concerns the 'causes and treatment of schizophrenia and other psychoses'. In recent years we have made huge progress in understanding the psychology of what had previously often been thought of as a largely biological problem, an illness. Much has been written about the biological aspects: this report aims to redress the balance by concentrating on the psychological and social aspects, both in terms of how we understand these experiences and also what can help when they become distressing. We hope that this report will contribute to a fundamental change that is already underway in how we as a society think about and offer help for 'psychosis' and 'schizophrenia'. For example, we hope that in future services will no longer insist that service users accept one particular view of their problem, namely the traditional view that they have an illness which needs to be treated primarily by medication. The report is intended as a resource for people who work in mental health services, people who use them and their friends and relatives, to help ensure that their conversations are as well informed and as useful as possible. It also contains vital information for those responsible for commissioning and designing both services and professional training, as well as for journalists and policy-makers. We hope that it will help to change the way that we as a society think about not only psychosis but also the other kinds of distress that are sometimes called mental illness. This report was written by a working party mainly comprised of clinical psychologists drawn from the NHS and universities, and brought together by their professional body, the British Psychological Society Division of Clinical Psychology. This report draws on and updates an earlier one, Recent Advances in Understanding Mental Illness and Psychotic Experiences,

which was published in 2000 and was widely read and cited. The contributors are leading experts and researchers in the field; a full listing with affiliations is given at the end of the report. More than a quarter of the contributors are experts by experience - people who have themselves heard voices, experienced paranoia or received diagnoses such as psychosis or schizophrenia. At the end of the report there is an extensive list of websites, books and other resources that readers might find useful, together with list of the academic research and other literature that the report draws on.

The Guide has been written primarily for students of AS and A Level English Literature as specified by Edexcel in the post-2015 syllabus (9ET0). It addresses Component 1 (8ET0/01 - Poetry and Drama) of the AS syllabus and Component 3 (9ET0/03 - Poetry) of the A2 syllabus, specifically, the requirement to study a selection of Post-2000 poetry. The Guide covers all the poems in the selection from *Poems of the Decade: An Anthology of the Forward Books of Poetry 2002-2011* (ISBN 978-0571281732). The poems are explored individually, and links and connections between them are drawn as appropriate. The format of each exploration is similar: * A summary of the key themes of the poems, with a note on possible connections and links to other poems in the selection * An explanation of any key features of the poem that require additional contextual knowledge or illustration * A brief summary of the metric form, rhyme scheme or other structural features * A "walk-through" (or explication) of the poem, ensuring that what is happening in the poem is understood, how the rhythm and rhyme contribute to meaning, an explanation of the meaning of words which may be unfamiliar, an exploration of imagery and language and a comment on main themes.
