"Foreword ASTM International has compiled this valuable companion resource to the American Welding Society (AWS) Structural Welding Code D1.1. All ASTM specifications, practices, and test methods referenced by the AWS Code are found in this publication as well as several other key welding standards. Some standards referenced in the D1.1 code have been withdrawn or superseded by newer ASTM standards, and these current versions are also included. The compilation will be a useful, one-source reference for a broad cross-section of users of AWS D1.1 including those quality professionals, such as inspectors, supervisors, engineers, and managers. The content was developed by the following three ASTM International Committees: A01 on Steel, Stainless Steel and Related Alloys; E07 on Nondestructive Testing; and E28 on Mechanical Testing. These committees, which meet twice a year, have jurisdiction over hundreds of standards. You can be part of this important initiative. ASTM members are individuals and corporations who contribute their expertise to influence the standards being set for their industries. The work of ASTM International members makes products and services safer, better, and more cost effective. In short, ASTM International standards contribute toward product quality, enhancing communication, and overall customer satisfaction"--

This specification provides the general welding requirements for welding aircraft and space hardware. It includes but is not limited to the fusion welding of aluminum-based, nickel-based, iron-based, cobalt-based, magnesium-based, and titanium-based alloys using electric arc and high energy beam processes. There are requirements for welding design, personnel and procedure qualification, inspection, and acceptance criteria for aerospace, support, and non-flight hardware. Additional requirements cover repair welding of existing hardware. A commentary for the specification is included.

This guide acquaints the user with the nondestructive examination methods commonly used to examine weldments. The standard also addresses which method best detects various types of discontinuities. The methods included are visual, liquid, penetrant, magnetic particle, radiographic, ultrasonic, electromagnetic (eddy current), and leak testing.

A certified welding inspector is expected to be capable of ensuring the safety and compliance of welding projects to assure quality of the finished product. There are two exam parts, with the first being a written exam. This product covers the written exam only. This book provides questions that focus primarily on the technical topics. We create these self-practice test questions referencing the concepts and principles currently valid in the welding profession. Each question comes with an answer and a short explanation which aids you in seeking further study information. For purpose of exam readiness drilling, this product includes questions that have varying numbers of choices. Some have 2 while some have 5 or 6. We want to make sure these questions are tough enough to really test your readiness and draw your focus to the weak areas. Think of these as challenges presented to you so to assess your comprehension of the subject matters. The goal is to reinforce learning only. The questions are NOT designed to "simulate" actual exam questions. "realistic" or actual questions that are for cheating purpose are not available in any of our products.
