Young serial entrepreneur Scott Gerber is not the product of a wealthy family or storied entrepreneurial heritage. Nor is he the outcome of a traditional business school education or a corporate executive turned entrepreneur. Rather, he is a hard-working, self-taught 26-year-old hustler, rainmaker, and bootstrapper who has survived and thrived despite never having held the proverbial "real" job. In *Never Get a "Real" Job: How to Dump Your Boss, Build a Business, and Not Go Broke*, Gerber challenges the social conventions behind the "real" job and empowers young people to take control of their lives and dump their nine-to-fives—or their quest to attain them. Drawing upon case studies, experiences, and observations, Scott dissects failures, shares hard-learned lessons, and presents practical, affordable, and systematic action steps to building, managing, and marketing a successful business on a shoestring budget. The proven, no-b.s. methodology presented in *Never Get a "Real" Job* teaches unemployed and underemployed Gen-Yers, aspiring small business owners, students, and recent college graduates how to quit 9-to-5s, become their own bosses, and achieve financial independence.

The four volumes of the "Virtual Airplane" series will teach you how to create the model shown on the cover. This guide assumes that you may know nothing about the 3D modeling software, so it starts the course from the very basics. In subsequent chapters the author builds a computer model of the P-40B fighter, gradually introducing new methods and tools. Every step of this workflow is shown in numerous illustrations. This first volume ("Preparations") describes how to prepare and verify the reference drawings, which you need to build a 3D model. "Preparations" also discusses various methods of checking and enhancing these reference images. It can be useful, as a guide on its own, for all who would like to draw accurate scale plans. You can learn there how to use photos and original aircraft documentation (including manufacturer's blueprints).

"Frontier of Faith" examines the history of Islam—especially that of local "mullahs," or Muslim clerics—in the North-West Frontier. A largely autonomous zone straddling the boundary of Pakistan and Afghanistan, the Tribal Areas was established as a strategic buffer zone for British India, and the resulting autonomy allowed local mullahs to assume roles of tremendous power. After Partition in 1947, the Tribal Areas maintained its status as an autonomous region, and for the next fifty years the "mullahs" supported armed mobilizations in exchange for protection of their vested interests in regional freedom. Consequently the Frontier has become the hinterland of successive, contradictory "jihad" in support of Pashtun ethnicism, anti-colonial nationalism, Pakistani territorialism, religious revivalism, Afghan anti-Soviet resistance, and anti-Americanism. Considering this territory is said to be the current hiding place of Osama bin Laden, there couldn't be a better time for a sourcebook detailing the intricacies of the Pakistan-Afghanistan borderlands today and the function of the "mullahs" and their allies.

Here, in one volume, are two remarkable novels by the chief spokesman of the so-called “new novel” which has caused such discussion and aroused such controversy. “Jealousy,” said the New York Times Book Review “is a technical masterpiece, impeccably contrived.” “It is an exhilarating challenge,” said the San Francisco Chronicle. The Times Literary Supplement of London called Robbe-Grillet an “incomparable artist” and the Guardian termed Jealousy “an extraordinary book.” In his native France, leading critic Maurice Nadeau wrote in France-Observateur that “In the Labyrinth is better than an excellent novel: it is a great work of literature,” and fellow novelist and critic Claude Roy judged the same work Robbe-Grillet’s “best book,” while here in America the “Parade of Books” column called In the Labyrinth “a highly emotional experience for the reader” and went on to predict: “Robbe-Grillet will take his place in world literature as a successor of Balzac and Proust.” This volume, which offers incisive essays on Robbe-Grillet by Professor Bruce Morrissette of the University of Chicago and by French critics Roland Barthes and Anne Minor, also contains a helpful bibliography of writings by and about the author.

modern age have been made possible by the unique combination of new technologies. Among them, medicine has completely changed our perception of life. Longevity has been significantly extended and linked to new lifestyles. The negative impact that pathologies and ageing have always had on the quality of our life is now mitigated by the availability of treatments daily applied to many individuals worldwide. For many years, pharmacological and surgical treatments have been supported by the introduction of biomedical devices. Biomedical implants have played a key role in the development of these treatments and achieved the objective of replacing tissue and organ structures and functionalities. Gradually, the scientific and clinical communities have understood that replacement could be improved by materials able to interact with the tissues and to participate in their metabolism and functions. This approach soon led to biomedical implants with improved clinical performances, but also to a new aspiration; rather than replacing damaged tissues and organs scientists and clinicians nowadays aim at their partial or complete regeneration. As a consequence of this ambition, the disciplines of tissue engineering and regenerative medicine have recently emerged. It is the dawn of a fascinating era where scientists from various disciplines, clinicians, and industry will need to intensify their collaborative efforts to provide our

An instant classic when first published in 1991, *How to Lie with Maps* revealed how the choices mapmakers make—consciously or unconsciously—mean that every map inevitably presents only one of many possible stories about the places it depicts. The principles Mark Monmonier outlined back then remain true today, despite significant technological changes in the making and use of maps. The introduction and spread of digital maps and mapping software, however, have added new wrinkles to the ever-evolving landscape of modern mapmaking. Fully updated for the digital age, this new edition of *How to Lie with Maps* examines the myriad ways that technology offers new opportunities for cartographic mischief, deception, and propaganda. While retaining the

same brevity, range, and humor as its predecessors, this third edition includes significant updates throughout as well as new chapters on image maps, prohibitive cartography, and online maps. It also includes an expanded section of color images and an updated list of sources for further reading.

Ten years ago, in 2003, Gayton McKenzie was released from maximum-security prison in Bloemfontein after a long jail term. Like most ex-convicts he had no money and very big dreams. Unlike most ex-convicts he went on to become South Africa's most highly paid motivational speaker, a bestselling co-author of an autobiography, a successful businessman and a mining consultant earning millions. He did this despite only having matric and a violent criminal record. To many, what he achieved should have been impossible. But hustlers succeed not because of anything. They succeed despite everything. The McKenzie story is unique, but there are so many universal truths behind it that a book like this will speak to anyone who has ever been serious about following a seemingly impossible dream.

The authors trace the emergence of Ataturk and Reza Shah through the constitutional revolutions in Iran and the Ottoman Empire, which led to the introduction of European social models, the establishment of dictatorship and of secularist reforms. This produced in both Turkey and Iran highly authoritarian, nationalist, and quasi-westernised states, where the personality cult of the leader defined the politics of each country."

From one of our most critically acclaimed and beloved storytellers comes a sweeping novel set on board the Morning Light, a Nova Scotian merchant ship sailing through the south pacific in 1912. Kay and Thea are half-sisters, separated in age by almost twenty years, but deeply attached. When their stern father dies, Thea returns to Nova Scotia for her long-promised marriage to the captain of the Morning Light. But she cannot abandon her orphaned young sister, so Kay too embarks on a life-changing voyage to the other side of the world. At the heart of *The Difference* is a crystallizing moment in Micronesia: Thea, still mourning a miscarriage, forms a bond with a young boy from a remote island and takes him on board as her own son. Over time, the repercussions of this act force Kay, who considers the boy her brother, to examine her own assumptions--which are increasingly at odds with those of society around her--about what is forgivable and what is right. Inspired by a true story, Endicott shows us a now-vanished world in all its wonder, and in its darkness, prejudice and difficulty, too. She also brilliantly illuminates our present time through Kay's examination of the idea of "difference"--between people, classes, continents, cultures, customs and species. *The Difference* is a breathtaking novel by a writer with an astonishing ability to bring past worlds vividly to life while revealing the moral complexity of our own.
