Multi-Family Therapy for Anorexia Nervosa is a treatment manual that details an empirically supported and innovative treatment for this disorder. This book provides a detailed description of the theory and clinical practice of MFT-AN. The treatment draws on the Maudsley Family Therapy for Anorexia Nervosa model as well as integrating other psychological and group frameworks. Part I details the theoretical concepts, MFT-AN structure, content and implementation, including clinically rich and detailed guidance on group facilitation, therapeutic technique and troubleshooting when the group process encounters difficulties. Part III provides step-by-step instructions for the group activities in the initial four-day intensive workshop and for the subsequent follow-up days that occur over a further six to eight months. The book will serve as a practical guide for both experienced and new clinicians working with children and adolescents with eating disorders and their families, in utilising multi-family therapy in their clinical practice.

Research is vital in moving the field of family therapy forward, but the myriad of possibilities inherent in working with systems and individuals can overwhelm even the most seasoned researcher. *Advanced Methods in Family Therapy Research* is the best resource to address the day-to-day questions that researchers have as they investigate couples and families, and the best source for learning long-term theory and methodology. The contributors of this volume share their wisdom on a wide variety of topics including validity concerns, measuring interpersonal process and relational change, dyadic data analysis (demonstrated through a sample research study), mixed methods studies, and recruitment and retention. The volume contains one of the most detailed descriptions of data collections and covers interviewing, using questionnaires, and observing brain activity. Also addressed are suggestions to meaningfully reduce cultural bias, to conduct ethical research, and, in the Health Services Research chapter, to examine interventions for clients in various income brackets. A separate, ground-breaking chapter also addresses psychophysiological research in a couple and family therapeutic context. As an added benefit, readers will learn how to become informed consumers of journal articles and studies, how to produce quality, publishable research, and how to write fundable grant proposals. Each chapter provides a clear and detailed guide for students, researchers, and professionals, and as a whole *Advanced Methods in Family Therapy Research* advances the field by teaching readers how to provide evidence that marriage and family therapy not only relieves symptoms, but also effects behavioral change in all family members.

In this widely adopted text and professional reference, leading contributors provide the knowledge needed to design strong qualitative, quantitative, and mixed-method studies; analyze the resulting data; and translate findings into improved practices and programs. Following a consistent format, user-friendly chapters thoroughly describe the various methodologies and illustrate their applications with helpful concrete examples.

Showing how to weave assessment into all phases of therapy, this indispensable text and practitioner guide is reader friendly, straightforward, and practical. Specific strategies are provided for evaluating a wide range of clinical issues and concerns with adults, children and adolescents, families, and couples. The authors demonstrate ways to use interviewing and other techniques to understand both individual and relationship functioning, develop sound treatment plans, and monitor progress. Handy mnemonics help beginning family therapists remember what to include in assessments, and numerous case examples illustrate what the assessment principles look like in action with diverse clients. See also the authors' *Essential Skills in Family Therapy, Third Edition: From the First Interview to Termination*, which addresses all aspects of real-world clinical practice, and *Clinician's Guide to Research Methods in Family Therapy*.

Integrating recent research and developments in the field, this revised second edition introduces an easy-to-master strategy for developing and writing culturally sensitive case conceptualizations and treatment plans. Concrete guidelines and updated case material are provided for developing conceptualizations for the five most common therapy models: Cognitive-Behavioral Therapy (CBT), Psychodynamic, Biopsychosocial, Adlerian, and Acceptance and Commitment Therapy. The chapters also include specific exercises and activities for mastering case conceptualization and related competencies and skills. Also new to this edition is a chapter on couple and family case conceptualizations, and an emphasis throughout on trauma. Practitioners, as well as graduate students in counseling and in clinical psychology, will gain the essential skills and knowledge they need to master case conceptualizations.

"Brief Strategic Family Therapy (BSFT) is a strengths based model for diagnosing and changing repetitive patterns of behavior that cause friction in families. This clinical guide to BSFT shows how practitioners can transform family interactions from conflictive to collaborative, from habitual to proactive, so the love trapped behind anger can flourish. When, for example, a teen is acting out, using drugs, or not attending school, the adults in the family need to assume leadership, and all members of the family must adapt their patterns of talking and behaving with one another for positive changes to take place. BSFT therapists aid in this process by analyzing how the family operates as a whole and the role that each member plays in the family organism. Readers of this book will learn how to engage reluctant families or family members, and structure 12 to 16 week cognitive and affective interventions that will effect powerful behavior change. Detailed clinical examples show practitioners how to navigate family complexities, and work through the challenging decision points they present"--

Drawing on the evidence-based Internal Family System (IFS) therapy model, *An Internal Family Systems Guide to Recovery from Eating Disorders: Healing Part by Part* addresses the necessity of healing the eating disorder sufferer's three groups of inner "Parts": the Mentors, the Advocates, and the Kids. In order to reconnect to their sense of Self and to achieve an inner balance necessary for recovery, the reader learns to address the unique needs of each of their "Parts." Written in an accessible style, this book combines compassionate examples from the author's client cases and her own recovery with a step-by-step framework for identifying and healing the readers' Parts using the IFS model. Each chapter ends with questions for the reader to answer to further enhance their personal recovery. *An Internal Family Systems Guide to Recovery from Eating Disorders: Healing Part by Part* will be essential to mental health professionals treating clients with eating disorders and to the clients themselves.

Multi-Family Therapy (MFT) involves the bringing together of different families in a therapeutic context in order to work jointly to overcome each of their specific and very individual problems. This innovative book combines the theory and concepts of MFT with detailed practical examples of techniques and exercises that have been proven to help with problematic children, teenagers and adults. In this book Asen and Scholz discuss how MFT has been developed over the past 30 years and has been applied nationally and internationally across a range of settings with a variety of clients, including: Children and teenagers who are excluded from school Multi-problem families with abuse and violence who challenge social workers and the legal system Children, teenagers and adults who present with mental health issues. *Multi-Family Therapy: Concepts and Techniques* is written for professionals in mental health, social work and education. Its unique pragmatic approach makes it an essential guide for anyone wishing to employ MFT.

Now in its fifth edition, *The Practice of Family Therapy* comes at a time when traditional approaches to psychotherapy have given way to multidimensional strategies that best serve the needs of diverse groups who are grappling with the many challenges unique to family therapy practice. With expanded coverage of different models, along with new developments in evidence-based and postmodern practices, this

integrative textbook bridges the gap between science and systemic/relational approaches, as it guides the reader through each stage of family therapy. Part I lays the groundwork by introducing the first-, second-, and third-generation models of family therapy, teaching the reader to integrate different elements from these models into a systemic structure of practice. Part II explores the practical application of these models, including scripts for specific interventions and rich case examples that highlight how to effectively work with diverse client populations. Students will learn how to make connections between individual symptoms and cutting-edge family practices to respond successfully to cases of substance abuse, trauma, grief, depression, suicide risk, violence, LGBTQ families, and severely mentally ill clients and their families. Also included are study guides for each model and a glossary to review main concepts. Aligned with the Association of Marital and Family Therapy Regulatory Boards' (AMFTRB) knowledge and content statements, this textbook will be key reading for graduate students who are preparing for the national licensing exam in marriage and family therapy.

This accessible text examines how the science of autonomy and adaptation informs all family therapy approaches and discusses how clinicians can use this science to improve their practice. Uniquely focussing on how to integrate science as well as theory into clinical practice, the book provides an overview of science from multiple domains and ties it to family systems theory through the key framework of autonomy and adaptation. Drawing on research from genetics, physiology, emotion regulation, attachment, and triangulation, chapters demonstrate how a comprehensive science-informed theory of family systems can be applied to a range of problematic family patterns. The text also explores self-of-the-therapist work and considers how autonomy and attachment are connected to systems of power, privilege, and oppression. Supported throughout by practical case examples, as well as questions for consideration, chapter summaries, and resource lists to further engage the reader, The Science of Family Systems Theory is an essential textbook for marriage and family therapy students as well as mental health professionals working with families.

Integrative, research-based, multisystemic: these words reflect not only the state of family therapy, but the nature of this comprehensive handbook as well. The contributors, all well-recognized names who have contributed extensively to the field, accept and embrace the tensions that emerge when integrating theoretical perspectives and science in clinical settings to document the current evolution of couples and family therapy, practice, and research. Each individual chapter contribution is organized around a central theme: that the integration of theory, clinical wisdom, and practical and meaningful research produce the best understanding of couple and family relationships, and the best treatment options. The handbook contains five parts: • Part I describes the history of the field and its current core theoretical constructs • Part II analyzes the theories that form the foundation of couple and family therapy, chosen because they best represent the broad range of schools of practice in the field • Part III provides the best examples of approaches that illustrate how clinical models can be theoretically integrative, evidence-based, and clinically responsive • Part IV summarizes evidence and provides useful findings relevant for research and practice • Part V looks at the application of couple and family interventions that are based on emerging clinical needs, such as divorce and working in medical settings. Handbook of Family Therapy illuminates the threads that are common to family therapies and gives voice to the range of perspectives that are possible. Practitioners, researchers, and students need to have this handbook on their shelves, both to help look back on our past and to usher in the next evolution in family therapy.

Doug Sprenkle - Awarded the American Family Therapy Academy (AFTA) 2010 Award for Distinguished Contribution to Family Therapy Research and Practice! Grounded in theory, research, and extensive clinical experience, this pragmatic book addresses critical questions of how change occurs in couple and family therapy and how to help clients achieve better results. The authors show that regardless of a clinician's orientation or favored techniques, there are particular therapist attributes, relationship variables, and other factors that make therapy specifically, therapy with couples and families more or less effective. The book explains these common factors in depth and provides hands-on guidance for capitalizing on them in clinical practice and training. User-friendly features include numerous case examples and a reproducible common factors checklist.

Flashcards for the Marriage and Family Therapy exam which employ the Leitner method of studying that focuses on the power of prioritization and feedback.

The counselor, teacher, and founder of The Relationship School reveals the origins of conflict styles, and how to stop avoiding and resolve conflict in relationships with loved ones. Conflicts in our closest relationships are scary because so much is at stake. If the conflict doesn't go well, we could lose our marriage, our family or our job, all connected to our security and survival. So we do just about anything not to lose those relationships, including avoid conflict, betraying ourselves or becoming dishonest. Unresolved conflict affects every single aspect of our lives, from self-confidence to physical and mental health. Jayson Gaddis is a personal trainer for relationships and one of the world's leading authorities on interpersonal conflict. For almost two decades, Gaddis has helped individuals, couples, and teams get to the bottom of their deepest conflicts. He helps people see the wisdom in conflict and how to get to zero—which means we have successfully worked through our conflict and have nothing in the way of a good connection. In *Getting to Zero*, Gaddis shows the reader how to stop running away from uncomfortable conversations and instead learn how to work through them. Through funny personal stories, uncomfortable examples, and effective tools and skills, he shows the reader how to move from disconnection to connection, acceptance, and understanding. This method upgrades the old tired and static conflict resolution approaches and offers a fresh, street-level, user-friendly road map on exactly how to work through conflict with the people you care most about.

Each chapter in this section • Focuses on the founder of the theory, its theoretical tenants, and its key techniques • Shows how the model focuses on diversity • Presents the research that supports the approach Part 3 addresses specific treatment areas that are common to marriage and family therapists, such as sex therapy, pre-

marital therapy, research, and ethics and legal issues. As an introduction to the field of Marriage and Family Therapy, this volume stands above the rest. Not only will readers gain an understanding of the rich history of the field and its techniques, but they will also see a complete picture of the context in which families are embedded, such as gender, culture, spirituality, and sexual orientation.
