Everyone does research. Some just do it better than others. In this chaotic world of information and misinformation, referred to as “information fog,” university students, in particular, need to learn how to conduct research effectively. Good research is about a quest to discover more, about a burning desire to solve society’s problems and make a better world. Ultimately, research is a way forward to a resolution of life’s greatest difficulties. In this seventh edition of *Research Strategies: Finding Your Way through the Information Fog*, author William Badke walks you step by step through the entire research process—from choosing a topic, to writing the final project, and everything in between. A seasoned researcher and educator, Badke offers tried-and-true tips, tricks, and strategies to help you identify a problem, acquire pertinent information, and use that information to address the problem. Employing a host of examples and humor, *Research Strategies: Finding Your Way through the Information Fog* shows how research can be exciting and fun.

This proceedings volume of the 5th AOIS Workshop is an opportunity for looking back at 25 years of organizing AOIS workshops. What did we achieve with the AOIS workshop series? Where were we 25 years ago, where are we now? Did our theme impact on the information systems? And in the way that we had hoped for? AOIS workshops have taken place in Seattle, Heidelberg, Stockholm, Austin, Montreal, Interlaken, Toronto, Bologna, Melbourne, and Chicago, always in conjunction with a

major conference on either multiagent systems in artificial intelligence (AI/MAS) or information systems (IS). We have tried to innovate in holding these workshops as biconference events (each year AOIS held two workshop events, one at an AI/MAS conference and one at an IS conference), as well as using the AOIS web site as a medium for communication among researchers. So, certainly, we have reached a wide audience of researchers around the world from both the AI/MAS and IS communities. But did we also manage to build up a dedicated AOIS community? Five years ago, we wrote: "Agent concepts could fundamentally alter the nature of information systems of the future, and how we build them, much like structured analysis, ER modeling, and Object-Orientation has precipitated fundamental changes in IS practice." Of course, a period of five years is too short for evaluating the success or failure of a new scientific paradigm. But still we may observe that while most IS conferences meanwhile list agents as one of their many preferred topics, agent-orientation is generally not considered to be a fundamental IS paradigm.
