This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L. Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Drawing is experiencing an unparalleled surge in the art world. *Passé* notions that once defined drawing as being a preparatory stage for painting or sculpture have long since been cast aside. Drawing is now fully recognized as its own art form—in the biennials, art fairs, museum exhibitions, and beyond. Drawing has come of age. Contemporary artists are increasingly discovering that drawing is something unique and different from painting. It is an intense, sensitive, compelling, personal, and utterly direct art form, one with its own concepts, characteristics, and techniques. In addition, contemporary drawing is not governed by any particular imagery, but rather encompasses a variety of approaches, including realist, abstract, modernist, and post-modernist. Contemporary Drawing delves into the essential and far-reaching concepts of this medium, exploring surface, mark, space, composition, scale, materials, and intentionality in

turn. Key techniques, such as using nature to induce marks and working with a checklist to determine a drawing's problems, are introduced throughout. Plus, an in-depth chapter examines a number of artists, such as William Kentridge and Gego, who are breaking traditional boundaries that separate one artistic discipline from another. Lushly illustrated by a wide range of highly accomplished contemporary artists, Contemporary Drawing offers a broad perspective on this expansive and energized field of art.

After the success at Normandy, the Allied commanders are confident that the war in Europe will soon be over. But in December 1944, in the Ardennes Forest, the Germans launch a ruthless counteroffensive that begins the Battle of the Bulge. The Führer will spare nothing to preserve his twisted vision of a "Thousand Year Reich," but stout American resistance defeats the German thrust. No Less Than Victory is a riveting account presented through the eyes of Eisenhower, Patton, and the soldiers who struggled face-to-face with their enemy, as well as from the vantage point of Germany's old soldier, Gerd von Rundstedt, and Hitler's golden boy, Albert Speer. Jeff Shaara carries the reader on a journey that defines the spirit of the soldier and the horror of a madman's dreams.
