With by-catch in fisheries becoming an ever more high-profile problem, this brilliant work could not be more timely. It contains contributions from the world's leading experts in by-catch reduction, who guide the reader through most aspects of the field. They examine the methodologies used to develop by-catch reduction techniques and provide new avenues for broadening such work. Case studies are provided that encompass most of the world's fishing techniques and regions.

Fatalities and serious diving injuries are rare and often seem to be associated with unsafe behaviors or hazardous conditions, but they can occur without apparent cause. Understanding the contributing factors could lead to safer diving. The primary goal of DAN's Annual Diving Report on Diving Incidents, Injuries and Fatalities is to further this understanding.

Computational science is an exciting new field at the intersection of the sciences, computer science, and mathematics because much scientific investigation now involves computing as well as theory and experiment. This textbook provides students with a versatile and accessible introduction to the subject. It assumes only a background in high school algebra, enables instructors to follow tailored pathways through the material, and is the only textbook of its kind designed specifically for an introductory course in the computational science and engineering curriculum. While the text itself is generic, an accompanying website offers tutorials and files in a variety of software packages. This fully updated and expanded edition features two new chapters on agent-

based simulations and modeling with matrices, ten new project modules, and an additional module on diffusion. Besides increased treatment of high-performance computing and its applications, the book also includes additional quick review questions with answers, exercises, and individual and team projects. The only introductory textbook of its kind—now fully updated and expanded Features two new chapters on agent-based simulations and modeling with matrices Increased coverage of high-performance computing and its applications Includes additional modules, review questions, exercises, and projects An online instructor's manual with exercise answers, selected project solutions, and a test bank and solutions (available only to professors) An online illustration package is available to professors

A reference to clinical diving medicine. Written for doctors and paramedics who are responsible for the medical needs of divers both on or under the water, this new edition retains the strengths of its predecessors, with the emphasis still firmly on practical management. It features an improved section on the diving medical examination, changes to chapters on mortality statistics and drowning, new sections on habitat diving, breath-hold diving and technical diving, and many new illustrations.

The book has many important features which make it suitable for both undergraduate and postgraduate students in various branches of engineering and general and applied sciences. The important topics interrelating Mathematics & Computer Science are also covered

briefly. The book is useful to readers with a wide range of backgrounds including Mathematics, Computer Science/Computer Applications and Operational Research. While dealing with theorems and algorithms, emphasis is laid on constructions which consist of formal proofs, examples with applications. Uptill, there is scarcity of books in the open literature which cover all the things including most importantly various algorithms and applications with examples.

This textbook is the basis for ALU Exam 101, the first exam in the ALU exam series.

A decompression procedure for repetitive diving to depths of 190 feet was devised employing modified Haldane principles which have been reported previously. The repetitive diving tables provide a system by which a diver can determine the necessary increase in decompression time on the second and successive dives, based on the amount of excess inert gas tension in his body after completion of the previous dive. The amount by which the decompression time must be increased varies inversely with the time (on surface) interval between dives. The information for using this system is obtained from four tables i.e. Decompression Table, No Decompression Table, Surface Interval Table and the Repetitive Dive Table. The validity of this procedure was tested by performing 62 repetitive dives with random combinations of depth, time and surface interval

The collection of the elder Seneca assembles quotations from scores of declaimers over a period spanning sixty years, from

the Augustan Age through the early decades of the empire. A view is offered onto a literary scene, for this critical period of Roman letters, that is numerous populated, highly interactive, and less dominated by just a few canonical authors. Despite this potential, modern readings have often lumped declaimers together en masse and organizational principles basic to Seneca's collection remain overlooked. This volume attempts to 'hear' the individual speech of declaimers by focusing on two speakers—Arellius Fuscus, rhetor to Ovid, and Papirius Fabianus, teacher of the younger Seneca. A key organizing principle, informing both the collection and the practice of declamation, was the 'shared locus'—a short passage, defined by verbal and argumentative ingredients, that gained currency among declaimers. Study of the operation of the shared locus carries several advantages: (1) we appreciate distinctions between declaimers; (2) we recognize shared passages as a medium of communication; and (3) the shared locus emerges as a community resource, explaining deep-seated connections between declamation and literary works.

A regional and transnational history of anarchism in Korea. This book provides a history of anarchism in Korea and challenges conventional views of Korean anarchism as merely part of nationalist ideology, situating the study within a wider East Asian regional context. Dongyoun Hwang demonstrates that although the anarchist movement in Korea began as part of its struggle for independence from Japan, connections with anarchists and ideas from China

and Japan gave the movement a regional and transnational dimension that transcended its initial nationalistic scope. Following the movement after 1945, Hwang shows how anarchism in Korea was deradicalized and evolved into an idea for both social revolution and alternative national development, with emphasis on organizing and educating peasants and developing rural villages. “In contrast to dominant Korean-language scholarship, this book has a dialectical understanding of the relationship between anarchism and nationalism, one that understands the importance of nationalism for revolution in the colonial context, but one that also shows convincingly that as anarchism in Korea grew and deepened, it acquired significantly transnational dimensions.” — Christopher Connery, author of *The Empire of the Text: Writing and Authority in Early Imperial China*
