In the tradition of Jon Krakauer's *Into Thin Air* and Sebastian Junger's *The Perfect Storm* comes a true tale of riveting adventure in which two weekend scuba divers risk everything to solve a great historical mystery—and make history themselves. For John Chatterton and Richie Kohler, deep wreck diving was more than a sport. Testing themselves against treacherous currents, braving depths that induced hallucinatory effects, navigating through wreckage as perilous as a minefield, they pushed themselves to their limits and beyond, brushing against death more than once in the rusting hulks of sunken ships. But in the fall of 1991, not even these courageous divers were prepared for what they found 230 feet below the surface, in the frigid Atlantic waters sixty miles off the coast of New Jersey: a World War II German U-boat, its ruined interior a macabre wasteland of twisted metal, tangled wires, and human bones—all buried under

decades of accumulated sediment. No identifying marks were visible on the submarine or the few artifacts brought to the surface. No historian, expert, or government had a clue as to which U-boat the men had found. In fact, the official records all agreed that there simply could not be a sunken U-boat and crew at that location. Over the next six years, an elite team of divers embarked on a quest to solve the mystery. Some of them would not live to see its end. Chatterton and Kohler, at first bitter rivals, would be drawn into a friendship that deepened to an almost mystical sense of brotherhood with each other and with the drowned U-boat sailors—former enemies of their country. As the men’s marriages frayed under the pressure of a shared obsession, their dives grew more daring, and each realized that he was hunting more than the identities of a lost U-boat and its nameless crew. Author Robert Kurson’s account of this quest is at once thrilling and emotionally complex, and it is written with a vivid sense of what divers actually experience when they meet the dangers of the ocean’s underworld. The story of *Shadow Divers* often seems too amazing to be true, but it all happened, two hundred thirty feet down, in the deep blue sea. **BONUS:** This edition includes an excerpt from Robert Kurson's *Pirate Hunters*. Filled with more than 350 images from National Geographic, *100 Dives of a Lifetime* provides the ultimate bucket list for ardent scuba divers and

aspirational travelers alike. From diving with manta rays at night in Kona, Hawaii, and swimming with hammerheads of Cocos Island in Costa Rica to exploring caves in Belize's Lighthouse Atoll and diving beneath the ice floes of Antarctica, this exquisite inspirational book is filled with beautiful imagery, marine life guides, trusted travel tips, and expert diving advice from world-famous National Geographic divers and explorers like Brian Skerry, Jessica Cramp, and David Doubilet. Organized by diving experience and certification level, each location offers a once-in-a-lifetime opportunity to explore the magic of our world's oceans--from your armchair or with your scuba gear in tow.

Martyn Farr's *The Darkness Beckons* charts the history and development of cave diving, from early underwater expeditions in France in the late nineteenth century, through to cutting-edge dives across the globe, where iron-willed individuals are pushing the limits of equipment and techniques in the pursuit of exploration. Cave diving is the natural evolution of caving, where cavers and open-water divers overcome the challenges of water-filled passages by using specialist breathing apparatus to explore further and deeper than ever before. The challenges are many – distance, depth, temperature, visibility, rockfall and simple restriction in passage size – together with the physical and mental demands placed on an individual in an environment

where, despite meticulous preparation, equipment can malfunction and one cannot expect to be rescued if something goes wrong. Early cave dives were made using Standard Equipment diving suits, before 'frogman' equipment was adopted by British and Italian divers in the 1940s. Around the same time, Jacques-Yves Cousteau and Émile Gagnan designed the compressed-air aqualung, the first scuba equipment. The development of breathing apparatus has continued, alongside solutions to evermore challenging projects, especially those at extreme depth. British cave divers, including the author, have been at the forefront of many developments, such as the explorations at Wookey Hole in the Mendips, Keld Head in the Yorkshire Dales and Pozo Azul in Spain. Cave diving today is a truly international endeavour, and Farr gives detailed and engaging accounts of developments in Europe, the Americas, Australia and New Zealand, Southern Africa and more. Farr introduces cave diving's pioneers and chronicles their achievements. Among a cast of many are the Britons Graham Balcombe and Mike Boon; the American Sheck Exley, who died while attempting to establish a new depth record in the Zacatón sinkhole in Mexico; and the outstanding German cave diver and equipment innovator Jochen Hasenmayer. The stories of their adventures are charged with courage, danger and excitement, and some have led to tragedy. First
