Pharmacology education in nursing has become increasingly important as nurses' roles in administering, prescribing and educating patients about their medications have grown. Nurses are the last barrier between any particular drug and patient. This is why it is so important to be knowledgeable when it comes to drug uses, doses, side effects, and contraindications. In addition to the obvious benefit of protecting our patients and fulfilling our oath to do no harm, it benefits all nurses to know and be well versed in the drugs they are administering in order to protect themselves and their nursing licenses.

### Pharmacology Clear and Simple

I've had feedback from students that they just want me to read them drug names and mnemonics so they can put in their earbuds before they go to bed before their board exams. I've got three five year olds, I don't have time to do the heavy lifting you all do as narrators. In *Memorizing Pharmacology: A Relaxed Approach*, which will sell over 6,500 audiobook copies in its first year, I only had the narrator complete 200 drug names in a seven hour book. There is a list of 350 later in the book, but I thought, who in the world would want to listen to 350 drug names in a row? So I omitted it. There was an answer to that rhetorical question, health professional students studying for a board exam that are exhausted from family, work, and school want to listen to it. This print, book, however, provides a journal for you to continue to add knowledge you pick up as you complete your pharmacology class, clinicals, or even an interesting commercial or YouTube video.
