The reorganized text is divided into seven parts. Part I provides an overview of the field in the psychology of physical activity. Part II examines characteristics of people that can affect their behavior and psychosocial well-being in sport, exercise, and physical activity contexts. In part III, students learn about socioenvironmental factors that impinge on participants' behavior and psychosocial well-being in sport and physical activity domains. Part IV explores psychological factors that can affect behavior and performance in sport and physical activity settings. In part V, students gain insights into the motivational models and theories regarding individuals' behavior in sport, exercise, and physical activity contexts. Part VI discusses the links between sport, physical

activity, exercise, and health. Part VII analyzes the concepts related to lifespan and developmental processes. organized in four sections. The first section provides a foundation by familiarizing readers with the current ecological crisis and its historical origins, and by offering a vision for a sustainable future. The next five chapters present psychological research methods, theory, and findings pertinent to understanding, and changing, unsustainable behavior. The third section addresses the reciprocal relationship between planetary and human wellbeing and the final chapter encourages readers to take what they have learned and apply it to move behavior in a sustainable direction. The book concludes with a variety of theoretically and empirically grounded ideas for how to face this challenging task with positivity, wisdom, and enthusiasm. This textbook may be used as a primary or secondary textbook in a wide range of courses on Ecological Psychology, Environmental Science, Sustainability Sciences, Environmental Education, and Social Marketing. It also provides a valuable resource for professional audiences of policymakers, legislators, and those working on sustainable communities. In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it. "This book has been written in the ever strengthening conviction that psychology is most naturally, consistently, and effectively treated as a study of conscious selves in relation to other selves and to external objects--in a word, to their environment, personal and impersonal. However he defines his science, every psychologist talks and

Online Library Psychological Science 4th Edition

writes about selves--of myself and yourself--as conscious of people, of things, or of laws and formulae. The psychology of self, which this book sets forth, is a conscious adoption and scientific exposition of this natural and practically inevitable conception. In general, I have tried to make a simpler, more direct approach to the subject. In the earlier book, I treated psychology in a twofold fashion, both as science of selves and as science of ideas (or 'mental processes'), discussing all forms of consciousness from both points of view. I have here abandoned this double treatment, with the intent to simplify exposition, not because I doubt the validity of psychology as study of ideas, but because I question the significance and the adequacy, and deprecate the abstractness, of the science thus conceived. In a second fashion this book differs from the other. I have tried to embody what appear to me to be the important results of so-called functional psychology. That is to say, I have taken explicit account of the characteristic bodily reactions on environment which accompany perception, thought, emotion, and will; and I have briefly considered the various forms of consciousness as factors in conduct, and as significant in individual and in social development"--Preface.

This third edition builds on the international success of previous editions, offering an easy access critical introduction to social science theories of identity, for advanced undergraduates and postgraduates. All of the previous chapters have been updated and extra material has been added where relevant, for example, on globalization. Two new chapters have been added; one addresses the debate about whether identity matters, discussing, for example, Brubaker; the second reviews the postmodern approach to identity. The text is informed by relevant topical examples throughout and, as with earlier editions, the emphasis is on sociology, anthropology and social psychology; on the interplay between relationships of similarity and difference; on interaction; on the categorization of others as well as self-identification; and on power, institutions and organizations.
