The Social Security Administration (SSA) uses a screening tool called the Listing of Impairments to identify claimants who are so severely impaired that they cannot work at all and thus immediately qualify for benefits. In this report, the IOM makes several recommendations for improving SSA's capacity to determine disability benefits more quickly and efficiently using the Listings.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest

as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the

critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

Bullying has long been tolerated as a rite of passage among children and adolescents. There is an implication that individuals who are bullied must have "asked for" this type of treatment, or deserved it. Sometimes, even the child who is bullied begins to internalize this idea. For many years, there has been a general acceptance and collective shrug when it comes to a child or adolescent with greater social capital or power pushing around a child perceived as subordinate. But bullying is not developmentally appropriate; it should not be considered a normal part of the typical social grouping that occurs throughout a child's life. Although bullying behavior endures through generations, the milieu is changing.

Historically, bullying has occurred at school, the physical setting in which most of childhood is centered and the primary source for peer group formation. In recent years, however, the physical setting is not the only place bullying is occurring. Technology allows for an entirely new type of digital electronic aggression, cyberbullying, which takes place through chat rooms, instant messaging, social media, and other forms of digital electronic communication. Composition of peer groups, shifting demographics, changing societal norms, and modern technology are contextual factors that must be considered to understand and effectively react to bullying in the United States. Youth are embedded in multiple contexts and each of these contexts interacts with individual characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics and bullying perpetration or victimization.

Recognizing that bullying behavior is a major public health problem that demands the concerted and coordinated time and attention of parents, educators and school administrators, health care providers, policy makers, families, and others concerned with the care of children, this report evaluates the state of the science on biological and psychosocial consequences of peer victimization and the risk and protective factors that either increase or decrease peer victimization behavior and consequences.

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies

parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

In *Learning and Leading with Habits of Mind*, noted educators Arthur L. Costa and Bena Kallick present a comprehensive guide to shaping schools around Habits of Mind. The habits are a repertoire of behaviors that help both students and teachers successfully navigate the various challenges and problems they encounter in the classroom and in everyday life. The Habits of Mind include * Persisting * Managing impulsivity * Listening with understanding and empathy * Thinking flexibly * Thinking about thinking (metacognition) * Striving for accuracy * Questioning and posing problems * Applying past knowledge to new situations * Thinking and communicating with clarity and precision * Gathering data through all senses * Creating, imagining, innovating * Responding with wonderment and awe * Taking responsible risks * Finding humor * Thinking interdependently * Remaining open to continuous learning This volume brings together--in a revised and expanded format--concepts from the four books in Costa and Kallick's earlier work *Habits of Mind: A Developmental Series*. Along with other highly respected scholars and practitioners, the authors explain how the 16 Habits of Mind dovetail with up-to-date concepts of what constitutes intelligence; present instructional strategies for activating the habits and creating a "thought-full" classroom environment; offer assessment and reporting strategies that incorporate the habits; and provide real-life examples of how communities, school districts, building administrators, and teachers can integrate the habits into their school culture. Drawing upon their research and work over many years, in many

countries, Costa and Kallick present a compelling rationale for using the Habits of Mind as a foundation for leading, teaching, learning, and living well in a complex world.

Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can

Trust in 2011, there has been an increasing emphasis on assuring that clinical practice

guidelines are trustworthy, developed in a

transparent fashion, and based on a systematic review of the available research evidence. To align

with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the

National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American

Psychiatric Association (APA) has adopted a new process for practice guideline development. Under

this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather

than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete

clinical questions of relevance to an overarching

subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision

making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

Music Practice Journal: A daily journal to track your musical progress for a year, created by Allysia and Logan from PianoTV. reading, ear training and listening exercises. It's difficult to keep track of practice goals and progress. For years I used simple, plain notebooks to keep track of my practice, but the results were iffy. It took too much effort to write everything down, so I would abandon the process after a while. I decided to take matters into my own hands and create a practice journal of my own. I wanted it to be something small that I could write short notes in, but something that would also allow me to see my long-term growth and progress. It was important to me that this journal be compact yet practical - however, I also wanted it to look good! That's why the entire journal is in full color. Colored pages make your notes stand out more, and also make it easier to see the passage of a month's practice at a glance (each month is a different color). Here are some features of this music practice journal: Space for a year's worth of daily practice notes Spaces for technique, repertoire, sight reading, ear training, and even what you're listening to A place to record how much time you spend practicing, on a daily and monthly basis Monthly reviews to help you stay on track with your goals Pages to set yearly goals, and a yearly goals review A repertoire list to keep track of your favorite pieces that you can perform well Each "week" of practice in this journal contains six practice entries. Each "month" totals to 30 days. You can either skip the spaces you don't practice, or simply fill in each space when you do practice, regardless of month. This music practice journal contains all the elements I deem essential to well-rounded practice, based on my 10-year teaching experience. Its small size makes it a dream to carry around. It will also benefit your music lessons since your teacher (if you have one) will be able to see the work you've been doing at a quick glance.
