This book examines the role of comics in the perpetuation of the myth of the American West. In particular, it looks at the ways in which lone central characters, and their acts of violence, are posited as heroic. In doing so, the book raises questions both about the role of women in a supposedly male space, in addition to the portrayal of Native Americans within the context of this violence. Various adaptations of historical figures, such as Buffalo Bill and Billy the Kid, as well as film and television stars such as The Lone Ranger and Dale Evans are examined in detail. Although concentrating on American comics, examples both from Britain and France are also analyzed.

This book disseminates and discusses relevant best case examples and research practices that show how nanomaterial research and related engineering concepts may provide answers and viable solutions to a variety of socioeconomic issues and concerns. The first section is dedicated to the development of new materials and their characterization. The second section addresses modeling and scale transition (from and to nanoscale) processes, and the third section presents applications in the environmental and energy sectors. Nanoporous Materials for Energy and the Environment covers a wide selection of subjects ranging from modeling and material design to the preparation and use of nanoporous catalysts, adsorbents, and membranes. The topics discussed include proton exchange membranes; carbon nanotube (CNT)-based electrodes for fuel cells; advanced design of lithium batteries and supercapacitors using CNTs; multifunctional catalyst for biomass conversion; advanced characterization and modeling of nanomaterials and membranes (including gas transport and multiscale modeling); use of membranes in energy applications, gas treatment, and separations; and development of multifunctional photoactive membranes and of nanoordered 2D photoactive titania films and membranes.

This reworked version of Conflict of Laws introduces a new generation of students to the classic. It has been completely rewritten to reflect all the recent developments including the increased legislation and case law in the field. The author's teaching experience is reflected in her ability to provide students with a clear statement of rules which sets out a framework to the subject, before adding detail and critical analysis. Recognising that the procedural aspect of the subject challenges most students, the book explores conflict of laws in its practical context to ensure understanding. Teachers will appreciate the logical structure, which has been reworked to reflect teaching in the field today. Retaining the authority that was the hallmark of the previous edition, this contemporary and comprehensive textbook is essential reading.

This new book looks at British Politics in the 1760's and 1770's during the American Revolution. Perry looks particularly at colonialism and the colonial administration, and at the general conduct of the war with America. He also surveys the development of radicalism in Britain subsequent to the war and looks at constitutional developments during this period in Britain and America. TV presenter, writer and adventurer Alice Morrison gives her own unique and personal insight into Morocco, her home for 1001 nights. When Alice Morrison headed out to Morocco, it was to take on one of the most daunting challenges: to run in the famous Marathon des Sables. Little did she expect to end up living there. But as soon as she settled in a flat in Marrakech, she was won over by the people, the spectacular scenery and the ancient alleyways of the souk. Soon she was hiking over the Atlas mountains, joining nomads to sample their timeless way of life as they crossed the Sahara desert, and finding peace in a tranquil oasis. Despite more than 10 million tourists coming to Morocco each year, there is remarkably little that has been written about its people, their customs and the extraordinary range of places to visit, from bustling markets to vast, empty deserts. Alice makes sure she samples it all, and as she does she provides a stunning portrait of a beautiful country. As a lone woman, she often attracts plenty of curiosity, but her willingness to participate - whether thigh deep in pigeon droppings in a tannery or helping out herding goats - ensures that she is welcomed everywhere by a people who are among the most hospitable on the planet. Alice came to fame with her BBC2 series Morocco to Timbuktu, and now she joins the ranks of great travel writers who can bring a country vividly to life and instantly transport the reader to a sunnier place. If you're thinking of going to Morocco, or you want to recall your time there, My 1001 Nights is the ideal book.

Scott Foresman Calle de la Lectura 2011 is an all-new comprehensive K-6 Spanish Reading and Language Arts series for the 21st Century. Calle de la Lectura delivers a balance of authentic and transadapted literature, scientifically research-based instruction, multiple teaching for transfer opportunities, and a wealth of groundbreaking online experiences for high student engagement. My Teaching Library takes the guesswork out of Response to Intervention with a strong core emphasis on ongoing progress-monitoring and an explicit plan for managing small groups of students. The architecture of Understanding by Design accelerates all learners toward greater proficiency with a sustained Unit focus on comprehension skills and strategies, concept and language development, and writing for a variety of formats and purposes.

"This book examines the discursive connections between global flows of ideologies about leadership and good governance, how these ideologies are localized in Indonesia, and how all of this relates to changing political, bureaucratic, and market regimes between 1998 and 2004. It starts with a speech given by the head of the International Monetary Fund about the importance of good governance. It then traces the uptake of shibboleths of this speech within Indonesian government policy documents, within the Indonesian mass-media, and in the everyday talk that occurred in a government office in Indonesia during my five months of fieldwork in that office between August 2003 and January 2004. The book makes the case that in order to formulate nuanced interpretations of connection and processes of localization, researchers need to engage in a type of reflexivity that involves a constant movement between data from different timespaces. Such a practice, it is argued, adds to our understanding of how and why both researchers and those researched come to believe and present themselves in specific ways. In doing so, the book extends contemporary conceptual work in the broad areas of sociolinguistics and linguistic anthropology as it relates to notions of scale, connection, chronotope, leadership talk, and personhood, while sketching how this conceptual work can be operationalized methodologically"--

This text reviews the issues involved in handling and processing digital documents. Examining the full range of a document's lifetime, the book covers acquisition, representation, security, pre-processing, layout analysis, understanding, analysis of single components, information extraction, filing, indexing and retrieval. Features: provides a list of acronyms and a glossary of technical terms; contains appendices covering key concepts in machine learning, and providing a case study on building an intelligent system for digital document and library management;

discusses issues of security, and legal aspects of digital documents; examines core issues of document image analysis, and image processing techniques of particular relevance to digitized documents; reviews the resources available for natural language processing, in addition to techniques of linguistic analysis for content handling; investigates methods for extracting and retrieving data/information from a document.

Explores how UK politicians and the press mobilise support for 'austerity' through appealing to socially conservative conceptions of work and community. It examines the techniques of anti-austerity social movements in challenging the prevailing mood of guilt, nostalgia and resentment and how these may offer radical alternatives for social change.

For fans of "The Hunger Games", "Divergent", and "Lord of the Flies"--a gripping dystopian page-turner from the pen of Gemini-nominated writer, Nancy Isaak, that will keep you transfixed, well-entertained, and right on the edge of your seat. They were just two teenage girls--utterly normal in every way--until they woke up one morning to discover that they were all alone in a world gone mad. Somehow, while they slept, the world had changed; their parents, their friends, all had been taken...all disappeared. Now Kaylee Michelson and her best friend, Jay, must figure out not only how to live in this strange, new world--but how to survive. These are the facts as the girls know them: 1. Everyone is gone. 2. There is no internet, no t.v., no electricity, no phones; not even batteries work anymore. 3. It is very, very quiet. Kaylee and Jay--two terrified teenage girls who think they are all alone. Only--they are wrong...

Evans and new co-author Greenwell pay close attention to management in "new normal" straitened economic conditions and the pervasive impact of technology on a library manager's role.

With iOS 5, Apple added more than 200 new features to the iPad 2, but there's still no printed guide to using all its amazing capabilities. That's where this full-color Missing Manual comes in. You'll learn how to stuff your iPad with media, organize your personal life, wirelessly stream content to and from your tablet, stay connected to friends, and much more. The important stuff you need to know: Build your media library. Fill your iPad with music, movies, TV shows, eBooks, eMagazines, photos, and more. Go wireless. Sync content between your computer and iPad—no wires needed. Get online. Connect through WiFi or Wi-Fi + 3G, and surf the Web using the iPad's new tabbed browser. Consolidate email. Read and send messages from any of your email accounts. Get social. Use built-in apps like iMessage, Twitter, and Ping to stay in touch. Store stuff in iCloud. Stash your content online for free, and sync up all your devices automatically. Interact with your iPad. Learn new finger moves and undocumented tips, tricks, and shortcuts.

With over 300 training programs in neuroscience currently in existence, demand is great for a comprehensive textbook that both introduces graduate students to the full range of neuroscience, from molecular biology to clinical science, but also assists instructors in offering an in-depth course in neuroscience to advanced undergraduates. The second edition of Fundamental Neuroscience accomplishes all this and more. The thoroughly revised text features over 25% new material including completely new chapters, illustrations, and a CD-ROM containing all the figures from the text. More concise and manageable than the previous edition, this book has been retooled to better serve its audience in the neuroscience and medical communities. Key Features \* Logically organized into 7 sections, with uniform editing of the content for a "one-voice" feel throughout all 54 chapters \* Includes numerous text boxes with concise, detailed descriptions of specific experiments, disorders, methodological approaches, and concepts \* Well-illustrated with over 850 full color figures, also included on the accompanying CD-ROM

A traditional manuscript paper for Japanese writing is called Genkouyoushi. Compared to others, this notebook may be used with any type of writing instrument (pencil, pen or ink brush) with or without a shitajiki (under-sheet) and each template square allows for correct spacing of characters to fit one kanji, hiragana or katakana. It is a very perfect tool to learn writing in Japanese and it is especially useful to students for practice or formal assignments. Each page of this notebook is printed with vertical columns of squares, with each square designed to accommodate a single Japanese character or punctuation mark.

This book provides insight into the instances in which wildlife species can create problems. Some species trigger problems for human activities, but many others need humans to save them and to continue to exist. The text addresses issues faced by economists and politicians dealing with laws involving actions undertaken to resolve the problems of the interaction between humans and wildlife. Here, the words 'problematic species' are used in their broadest sense, as may be appreciated in the short introductions to the various sections. At times, the authors discuss special cases while always extending the discussion into a more general and broad vision. At others, they present real cutting-edge analysis of ecological topics and issues. The book will be of interest to biologists, ecologists and wildlife managers involved in research on wildlife, parks, and environmental management, as well as to government departments and agencies, NGOs and conservation wildlife organizations. Even those in contact with nature, such as hunters, herders, and farmers, will be able to find a great deal of important information. Specific case studies are selected from among the most significant and prevalent cases throughout the world. A total of 26 papers have been selected for this book, written by zoologists, biologists and ecologists. Many have an interdisciplinary approach, with contributions by economists, criminologists, technical specialists, and engineers.

It is appropriate that a surgical teacher. Robert E. Hermann. M.D . . with a large experience in a specialized field should author the beautifully illustrated Manual of Surgery of the Gallbladder. Bile Ducts. and Exocrine Pancreas. This manual. which takes its place in the distinguished series sponsored by Richard H. Egdahl, M.D . . is designed for the working surgeon. resident or practitioner. who wishes to refresh his memory or to bring himself abreast of current thinking and technics. The carefully planned format and the elegant color illustrations of Mr. Robert Reed permit this with the expenditure of a minimum of time and effort. and surgeons who must operate on the organs and structures it covers will wish to have it available for reference. Stanley O. Hoerr. M.D. former Chairman. Division of Surgery Cleveland Clinic Chairman. Department of Surgery Fairview General Hospital Cleveland. Ohio Preface Operations on the gallbladder and bile ducts are among the surgical procedures most commonly performed by general surgeons. In most hospitals, cholecystectomy is the most frequently performed operation within the abdomen; approximately 60,000, 000 are performed each year in the United States. In addition, an estimated 120,000 bile duct operations are performed yearly. Pancreatic surgery is less frequent, but because of the close relation between the biliary system and the pancreas, knowledge of pancreatic problems is equally essential to the surgeon.

Clemens Holzmann investigates the role of spatial contexts for autonomous embedded systems. The author presents concepts for recognizing, representing, and reasoning about qualitative spatial relations and their changes over time, as well as an appropriate architecture which has prototypically been implemented in a flexible software framework. His results show that the proposed concepts are suitable for developing spatially aware applications and that qualitatively abstracted relations can constitute an adequate basis for this purpose.

The increasing global demand for energy requires a versatile approach, prompting many researchers to focus on renewable bioenergy from different biomasses, especially cellulosic biomass. Such biomasses can be agricultural wastes, municipal wastes or direct harvests from high-yield energy crops. If properly pre-treated, the subsequent enzyme hydrolysis step is much more effective and can effectively minimise the waste disposal. Green Biomass Pretreatment for Biofuels Production reviews a range of pretreatment methods such as ammonium fiber explosion, steam explosion, dilute acid hydrolysis, alkali hydrolysis, and supercritical carbon dioxide explosion focusing on their final sugar yields from hemicellulose, glucose yields from cellulose, as well as on their feasibilities in bioenergy production processes at various scales.

This book emphasises the tactical mobile and on-farm scales applications that use green pretreatments and processing technologies without the need of on-site waste treatment. Because of the varieties of different biomasses, no single pretreatment is expected to be the universal choice. Some of the pretreatment methods present niche applications are also discussed.

This book takes a unique approach to analysing foreign capital flows. Using the neighbourhood model, it analyzes foreign capital inflows from the perspective of both the source and destination countries. Focusing on China, India and the Caribbean, it explores the direct and spillover effects of foreign capital on the destination countries' economy.

The Book of the BBC2 Series Morocco to Timbuktu: An Arabian Adventure Timbuktu. A city of legends and myths hidden in the heart of Africa. It was once the richest city on earth. Its greatest king changed the route of the Niger just so his wife could have a bath. Alice Morrison follows the ancient, lost salt roads from the top of Morocco across the burning sands of the Sahara to find the fabled city itself. This book is a good old-fashioned adventure with death-defying donkeys, a severe case of gold fever and plenty of goat gizzards for dinner. It explores one of the most dangerous routes in history which brought gold, salt and slaves across the Sahara and up to Europe. It is stuffed full of facts but never stuffy. It's also a peek behind the scenes at how a TV documentary is made and gives you an insiders' view of the process through the eyes of a very funny, first-time presenter. You'll laugh, you'll cry and you'll be an asset to any pub quiz history round by the end of it. First published in 2005. Routledge is an imprint of Taylor & Francis, an informa company.

Separate the facts from the fears about memory loss. For many older people and their families, the fear of progressive memory loss is the chief anxiety about aging. To them, lapses that younger people would laugh off as distraction may seem the early symptoms of an inevitable decline into senility. The good news is that most of these fears are unfounded. Kathleen Gose, a social worker, and Gloria Levi, a gerontologist, both have had years of experience working with older adults. They developed *Dealing with Memory Changes* to provide upbeat, practical answers to seniors' most pressing questions: • What memory changes are normal with age? • How does memory work and what conditions other than age can affect it? • How does age affect intelligence and the ability to learn? • What are the best strategies for remembering everyday details—such as house keys, shopping lists, and names? • What signs indicate a need for help? Plus, invaluable information on how memory is affected by nutrition, depression, stress, prescription drugs, alcohol, exercise—and much more.

*Architecture Itself and Other Postmodernist Myths* brings together an array of building fragments, drawings, models, and primary source documents, to present canonic projects from an unexpected and unfamiliar point of view. The exhibition challenges the typical narrative of the heroic architect by revealing a counter-reading of postmodern procedures. The purpose is simultaneously to deflate the postmodern mythologizing of the architect and inflate the importance of empirically describable architectural activity. In so doing, the exhibition will make original contributions both to a counter-historiography of the postmodern and to contemporary curatorial method. A broad selection of material evidence -- gathered from building sites, libraries, and archives -- supports accounts of architects' and architecture's entanglements with bureaucracy, the art market, and academic and private institutions, as postmodernization challenged the discipline to redefine its modes of practice and reconsider the very idea of architecture itself. Exhibition: CCA, Montréal, Canada (07.11.2018 - 07.04.2019).

From the configuration of Empire in the colonial period to the multiple facets of modern coloniality, this book offers a challenging approach to the developments and effects of imperial domination and neocolonial rule in Latin American.

When a term is overused, it tends to fall out of fashion. Cynicism seems to be an exception. Its polytropic versatility apparently prevents any discontinuation of its application. Everyone knows that cynicism denotes that which is deemed deleterious at a given time; and every time will specify its toxicities – the apparent result being the term's non-specificity. This study describes the cynical stance and statement so as to render the term's use scholarly expedient. Close readings of textual sources commonly deemed cynical provide a legible starting point. A rhetorical analysis of aphorisms ascribed to the arch-Cynic Diogenes facilitates describing the design of cynical statements, as well as the characteristic features of the cynical stance. These patterns are identifiable in later texts generally labeled cynical – above all in Machiavelli's *Principe*. With recourse to the Diogenical archetype, cynicism is likewise rendered describable in Gracián's *Oráculo manual*, Diderot's *Le neveu de Rameau*, and Nietzsche's *Posthumous Fragments*. This study's description of cynicism provides a phenomenon otherwise considered amorphous with distinct contours, renders transparent its workings, and tenders a dependable basis for further analyses.

*PostGIS in Action, Third Edition* shows you how to solve real-world geodata problems. You'll go beyond basic mapping, and explore custom functions for your applications. Summary In *PostGIS in Action, Third Edition* you will learn: An introduction to spatial databases Geometry, geography, raster, and topology spatial types, functions, and queries Applying PostGIS to real-world problems Extending PostGIS to web and desktop applications Querying data from external sources using PostgreSQL Foreign Data Wrappers Optimizing queries for maximum speed Simplifying geometries for greater efficiency *PostGIS in Action, Third Edition* teaches readers of all levels to write spatial queries for PostgreSQL. You'll start by exploring vector-, raster-, and topology-based GIS before quickly progressing to analyzing, viewing, and mapping data. This fully updated third edition covers key changes in PostGIS 3.1 and PostgreSQL 13, including parallelization support, partitioned tables, and new JSON functions that help in creating web mapping applications. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the technology PostGIS is a spatial database extender for PostgreSQL. It offers the features and firepower you need to take on nearly any geodata task. PostGIS lets you create location-aware queries with a few lines of SQL code, then build the backend for mapping, raster analysis, or routing application with minimal effort. About the book *PostGIS in Action, Third Edition* shows you how to solve real-world geodata problems. You'll go beyond basic mapping, and explore custom functions for your applications. Inside this fully updated edition, you'll find coverage of new PostGIS features such as PostGIS Window functions, parallelization of queries, and outputting data for applications using JSON and Vector Tile functions. What's inside Fully revised for PostGIS version 3.1 and PostgreSQL 13 Optimize queries for maximum speed Simplify geometries for greater efficiency Extend PostGIS to web and desktop applications About the reader For readers familiar with relational databases and basic SQL. An innovative examination of heritage politics in Japan, showing how castles have been used to re-invent and recapture competing versions of the pre-imperial past and project possibilities for Japan's future. Oleg Benesch and Ran Zwigenberg argue that Japan's modern transformations can be traced through its castles. They examine how castle preservation and reconstruction campaigns served as symbolic ways to assert particular views of the past and were crucial in the making of an idealized premodern history. Castles have been used to craft identities, to create and erase memories, and to symbolically join tradition and modernity. Until 1945, they served as physical and symbolic links between the modern military and the nation's premodern martial heritage. After 1945, castles were cleansed of military elements and transformed into public cultural spaces that celebrated both modernity and the pre-imperial past. What were once signs of military power have become symbols of Japan's idealized peaceful past.

Develops students' photographic and map interpretation skills in context. From award-winning author Simon Ross, Essential Mapwork Skills 3 builds on the popular features and classroom practicality of this well-liked series. The unique collection of case study-based activities uses a variety of thematic, topographical and topological maps, as well as accompanying aerial, ground and satellite photographs.

"Taken as a trilogy, consent not to be a single being is a monumental accomplishment: a brilliant theoretical intervention that might be best described as a powerful case for blackness as a category of analysis."—Brent Hayes Edwards, author of *Epistrophies: Jazz and the Literary Imagination* In *Stolen Life*—the second volume in his landmark trilogy consent not to be a single being—Fred Moten undertakes an expansive exploration of blackness as it relates to black life and the collective refusal of social death. The essays resist categorization, moving from Moten's opening meditation on Kant, Olaudah Equiano, and the conditions of black thought through discussions of academic freedom, writing and pedagogy, non-neurotypicality, and uncritical notions of freedom. Moten also models black study as a form of social life through an engagement with Fanon, Hartman, and Spillers and plumbs the distinction between blackness and black people in readings of Du Bois and Nahum Chandler. The force and creativity of Moten's criticism resonate throughout, reminding us not only of his importance as a thinker, but of the continued necessity of interrogating blackness as a form of sociality.

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

The result of a unique collaboration between clinicians, chemists and physicists, this book provides an unparalleled overview of a new generation of diagnostic tools in clinical pathology. The introductory chapters cover the present status and limitations of currently used methods, followed by an outline of promising novel spectroscopy-based technologies either under development or recently available on the market. The input from both technologists developing these new methods as well as routine clinicians familiar with practical aspects and medical relevance guarantees that this practical work is a valuable asset for a wide audience, including technical personnel and decision makers in treatment centers, experts working in companies developing diagnostic devices, and clinicians specializing in advanced diagnostic methods. Since basic researchers are increasingly adopting novel diagnostic tools developed for human use as well, this will also be of interest for biomedical research institutions with large animal facilities.

For anyone working with business and consumer contracts, this book provides essential information and advice on the statutory controls available to guard against the misuse of exclusion clauses.

Timmy is going on a school trip around the city. On this trip the class will get to see different types of transportation being used around the city. How many of these transports do you know?
